

Platinex Inc. is exploring an exciting gold prospect located in Ontario's emerging South Timmins Shining Tree gold camp. An immense provincially significant, glacial gold dispersion anomaly has been traced back to several potential sources, a twenty-one km section of the Larder Lake Break (Tyrrell-Ridout Deformation Zone) intersecting a syenite porphyry stock and the highly prospective target is drill ready in-part. The anomaly is characterized by high counts of gold grains and nuggets in the soil. This is a divining rod for gold in place. A staged drill program is ready to resume at Shining Tree to define and expand the known size of the Herrick Gold deposit and the former Ronda Mine and test numerous targets that have been identified on the property.

From August 2016 to June 2017 \$1,285,450 was raised to move the Company forward. The money raised is being used to cover the costs property expansion, preparing a qualifying report including a valuation of the Herrick deposit, sampling of targets identified in a 2012 report plus sections of core not previously assayed, reconstruction of the website emphasizing highlights and vital information in a clear and concise format, establishment of a cannabis division in the company and corporate services.

The Shining Tree property has been expanded to 35,000 acres including half of the former producing Ronda Gold Mine.

PROPERTY HIGHLIGHTS

Shining Tree Gold Property:

- Has the early stage attributes of a **world class gold camp**. It is on the intersection of two major gold structures and is flanked on three sides by major gold deposits and mines. The provincially significant gold dispersion train evidences a large gold source on the property. To follow up the discovery of coincident IP and gold anomalies, a drill program is to commence when financed. Continuity of Resource: 62 drill holes have been completed with good gold intersections on the Herrick deposit. An NI43-101 report is being drafted to guide exploration.
- Half of the former producing Ronda Gold Mine underlies property.
- Located in Abitibi region, approx. 120km north of Sudbury on *Cadillac / Larder Lake Break (Tyrrell—Ridout Deformation Zone)* that hosts many +10 million oz. gold deposits.
- Flanked by *IAMGOLD, Alamos Gold and Tahoe Resources* deposits and mines; early stages of new gold camp. These adjacent properties have been subject to multiple takeovers in the last four years
- Current focus on testing sources of very high gold in till counts deep drilling on Herrick deposit and Ronda Mine deposit. 20,000m drill program is being re-permitted.

NABISH LAKE Ni-Cu-PGE PROPERTY

- Located 20 km south of Dryden Ontario with road access
- 94 claim units for 1,504 hectares cover the Nabish Lake Mafic Intrusive Complex.
- Nabish Lake Complex part of a series of related layered complexes encircling the regional scale Atikwa batholith.
- Numerous Ni-Cu-PGE occurrences associated with values to 3.5% Ni, 6.5%Cu and anomalous PGE.
- A series of untested airborne VTEM anomalies appear associated with the feeder zone of the intrusion.
- The anomalies are associated with zones of high magnetic relief and are drill ready.
- 1,500 m drill program is planned to test VTEM anomalies, within an interpreted intrusive feeder zone, and magmatic layering in main intrusive body. Widespread presence of local high grade base metal showings is indicative of a Ni-Cu-PGE rich intrusion.

CANNABIS OPPORTUNITIES

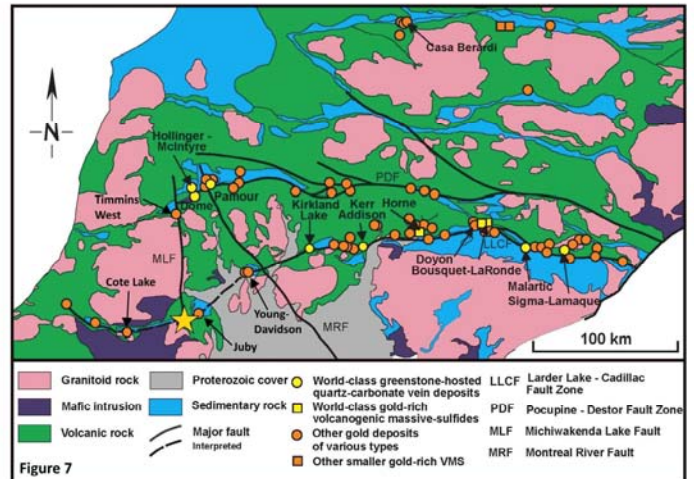

Platinex has engaged FMI Capital Advisory to analyze cannabis related acquisition and investment opportunities. Selection criteria have been developed and due diligence evaluator of a select group of prospects is in progress. The key objectives are to acquire businesses that demonstrate positive cashflow and significant growth potential.

Platinex has also engaged Hello Digital Marketing to develop an online platform capable of supplementing the growth potential of any acquisitions. An information site CannabisMall.org can be viewed online and has been developed to sponsor a cannabis community.

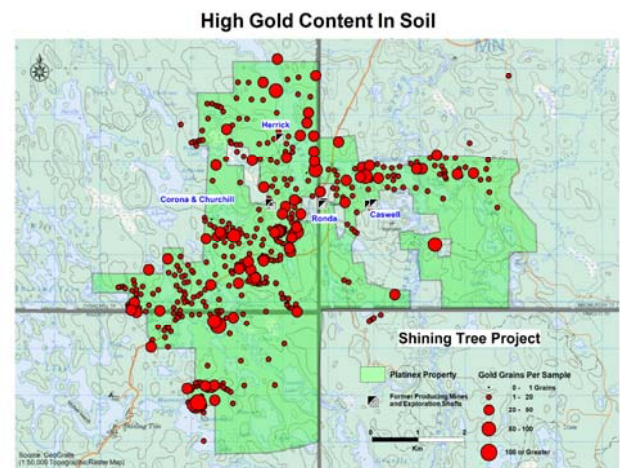

The timeframe for acquisitions is near.

OTHER EXPLORATION PROPERTIES

- **Tib Lake (PGE)** – north of Thunder Bay – 784 hectare (0.5% NSR—North American Palladium)
- **Big Trout Lake (PGE)** 4,816 hectares on major Chromium and PGE deposits (2.5% NSR—Ontario government) An in house valuation of the royalty has been conducted in order to sell the asset.

MANAGEMENT & BOARD OF DIRECTORS

James R. Trusler, PEng, President, CEO & Director: Geological engineer with 50 years of exploration experience and with a strong history of discovery and focus on PGE's and gold. (International Platinum major PGE explorer; Teck Resources—Hemlo Gold; Gulf Minerals—Athabasca Basin Uranium; Falconbridge Ltd—Raglan Nickel Belt)

R. Bruce Reilly, CPA, CFO & Director: Chartered Accountant with 30 years experience

Lorne D. Burden, PGeo, Director: Consulting Geologist, Recently Manager Corporate Development for Royal Nickel

Walter Henry, CFA, ICD.D, Director, President, CEO of Frontline Gold Corp. and Satori Resources Inc.

Mark Scarrow, CPA, Director: Co-founder of Scarrow Yurman & Co. with 29 years experience

J. David Mason, Strategic Advisor: Former CEO, Director Augen Gold Corp., Founder & Director Augen Capital
